en.communtu.org

Communtu is a Web2.0-plattform which eases the post-installation of programmes for Ubuntu.

According to your selections what you want to do with your computer, Communtu suggests programmes to you which will be installed automatically (this includes adding the sources and keys to the system). At the same time it is possible to refine your selection and receive additional information about single bundles or packages.

You have a question, idea or suggestion? You want to give us some feedback or critique? Contact us:

Purpose: Communtu

en.communtu.org

Match Ubuntu to
your personal needs

The plattform for:

>>> the installation of **individual metapackages**

>>> an **easy installation** through the selection of tasks you want to do with your computer

>>> creation of (post-)installations via **preconfigured bundles**

>>> **information about software**

>>> the administration of **individual programme-installations** by users

Get the desired programmes

with only a few clicks ...

You probably know this problem: Which programmes do I need if I want to do some work in webdesign or graphics?
Communtu suggests specific programmes to you and carries out the post installation.

1. What tasks do you want to do with your computer? (only a rough choice, can be chosen in detail later)

- ☐ Barrierefreiheit ⬆
- ☐ Büro ⬆
- ☐ Bildung und Wissenschaft
- ☐ Derivate ⬆
- ☐ Grafik/Design ⬆
- ☐ Internet ⬆
- ☐ Programmieren ⬆
- ☐ Spiele ⬆
- ☐ System ⬆
- ☐ Umstieg auf Ubuntu ⬆
- ☐ Unterhaltungsmedien

Next you choose which distribution and version you want to use:

2. Please select a Ubuntu version. How do I find out the version which is in use?
   Via your webbrowser detected version: 9.04 (jaunty)

   [Hardy Heron 8.04 ▾] ● Ubuntu ○ Kubuntu ○ Xubuntu

Furthermore you decide which sources you want to use:

Only the very save Ubuntu-sources or a little bit more unsave sources? In the same way you decide if you want to use only "Free Software" or if you want to accept "unfree Software" to assure a smooth change to Ubuntu.

3. Hier kannst du einstellen, wie sicher bzw. komfortabel deine Installationsquellen sein sollen
   ○ Nur Ubuntuquellen zulassen ("main/restricted", sehr sicher: Sicherheits-Updates von Ubuntu)
   ○ Auch Communityquellen zulassen ("universe/multiverse", auch sicher, mehr Programme/Komfort: gdmap, pdfedit, Acroread, ...)
   ● Alle Quellen zulassen (etwas unsicherer: Fremdpakete können das System gefährden, aber noch mehr Programme/Komfort: Skype, Virtualbox, DVDs ...)

4. Hier kannst du auswählen, welche Lizenzen du zulassen willst

   ○ Freie Software (Quellen liegen offen und dürfen weiterentwickelt werden)
   ● Unfreie Lizenzen zulassen (auch kostenlos, aber Quellen liegen nicht offen - sozusagen das Methadon für einen weichen Übergang zu Linux: Skype, Acroread, ...)

   [Speichern] [Speichern und feiner auswählen]

Now you have two possibilities: either you click on "Save" and you get to the page to install the software for the task you have selected or you click on "Save and choose packages" to make a detailed selection.

+	Film
	☐ PC als TV und Videorekorder
	Mythbuntu
	☐ Video erweitert
	ubuntustudio-video
+	Filme Gucken
+	Filme Machen

"Bundles" are shown to you here. These bundles consist of packages which belong to a specific task. In this example the basics for watching videos are selectet so that you can watch movies and DVDs without searching for codecs.
If you want to do more with movies you have the possibility to select more bundles, for example a bundle with which your computer is able to watch TV an record the shows.

If you want to do other task with your computer you can choose from other bundles. When clicking on a bundle name you receive links with further information, videos and reviews made by other users who want to share their experiences.

Finally, two metapackages will be created from your selections. The first one contains the sources and keys for the repositories and with the second metapackage the actual installation is carried out.

Perspective: we are currently working on the creation of CD-images based on the selections made by the user.

Communtu is available in both, English and German. Translations into other languages are expected.

... and have fun with

your Ubuntu
